

Are You Living With Pain?

Laser Therapy can be the Answer

Local Surrey Doctor, Dr. Rob Skleryk, D.C. hears a patient say, "You've given me my life back," he knows that he has successfully treated another person who needlessly suffered with pain. As president of Laser Health Solutions he treats all forms of soft tissue injuries with Laser Therapy. Shoulder injuries, plantar fasciitis, and tennis elbow are some typical conditions that respond well to Laser Therapy. It can even treat more serious conditions such as osteoarthritis and herniated discs.

Laser Therapy gets to the root of the problem, by treating the condition at a cellular level. It doesn't just mask the symptom of pain. "When this type of laser is absorbed by the tissue of the injured area, it gets converted to a biochemical energy called adenosine triphosphate, or ATP. Our cells can utilize this energy to heal and repair. Laser Therapy also restores normal function to damaged cells," said Dr. Skleryk.

For most conditions Dr. Skleryk treats, Laser Therapy is a permanent solution. And it works quickly, in some cases reducing pain and swelling of affected areas after one treatment. There's no need to suffer with tendonitis or plantar fasciitis for months or even years. **With just a few treatments, patients can be back to a pain-free life.** This means they're able to enjoy activities again, like gardening or golfing, that were often set aside because of the pain.

And athletes can get back in the game faster. Dr. Skleryk has treated Paul McCallum and Mark Washington from the B.C. Lions for various injuries. **It doesn't matter if you're a B.C. Lion or a weekend warrior, the last thing you want is to miss out on your sport because of injury.**

For arthritis, Laser Therapy has been shown to be a very effective pain management tool. "It puts the joint in a state of health that minimizes pain. Laser Therapy stimulates positive cellular change resulting in

less inflammation and swelling and, therefore, less pain. **For people who are reliant on pain medications with potentially harmful side effects, this is wonderful news. I've had many patients who've been able to eliminate their arthritis pain medications entirely by using Laser Therapy instead.**

For some arthritis patients, just being able to walk up and down stairs without pain is amazing to them, because they'd been told by many

Dr. Skleryk, D.C. with patient Chad Koehn being treated for elbow pain.

people there wasn't anything else that could be done. But there is and it's available right here in Surrey." A few years ago, you would've had to travel all the way to Toronto to receive Laser Therapy treatments. Laser Health Solutions has made it much more convenient with clinics located in:

- Surrey
- Vancouver
- Maple Ridge
- Calgary

Dr. Skleryk says much of the research done on Laser Therapy has been done in Europe and Asia, where it's been in use for decades and is widely accepted. He said mainstream medicine in Canada is slow to adopt new treatments besides drugs or surgery, but patients are eager to try new approaches. "People are looking

for alternatives," said Dr. Skleryk, adding, "Laser is the newest thing out there and patients are responding really well."

Patients are also pleased that Laser Therapy doesn't break the bank! The cost of a treatment is often less than massage, physiotherapy, or acupuncture. "We do everything possible to get you better as quickly as possible. The laser systems that we use are the most technologically advanced medical equipment available. We'll give you a stretching and strengthening program to improve your recovery time. All of this gets you better quickly and keeps your cost to a minimum."

Is Laser Therapy the right choice for you? Dr. Skleryk's advice is to call the clinic at 604-575-1331 to book a consultation and assessment. You can also visit the website at www.laserhealthsolutions.com. View some of the 2500 research studies done on Laser Therapy. One of most powerful things on the website is the patient testimonial section. Over 300 patients, with a variety of conditions ranging from arthritis to tennis elbow, talk about their experience with Laser Therapy.

Don't let injury and pain stand in the way of living your life to the fullest. Call Laser Health Solutions.

"I have been diagnosed with osteoarthritis in my knees. Before the laser therapy I could not walk anywhere without extreme pain in my knees and lower legs. I had been this way for about 10 years. After 5 or 6 treatments I began to notice a big difference. I could walk with a lot less pain, almost nothing compared with before the treatments. Now after 11 treatments I am able to walk without excruciating pain. It's a freedom I love. I can go shopping, do my housework and even go up and down stairs again. It's a great feeling to be without pain. I am forever grateful to Laser Health Solutions!"

*Colette G.
Surrey B.C.*

"Every few years, for the last 12 years, I would experience excruciating back pain to the point where I couldn't move. I was in so much pain, even physiotherapy wasn't helping. I heard about Laser Health Solutions from a friend and at that point I was willing to try anything. By my sixth laser treatment I was about 80% better, and able to do a lot more than I ever was able to before. I am now almost 100%."

*Jann D.
Ladner, B.C.*

"After breaking my clavicle, Dr. Rob immediately started treatment on the broken bone. The results were phenomenal and immediate. The laser helped stimulate bone cell growth and dramatically increased the mending process. In addition, I did not suffer range of motion limitations or scar tissue problems because of the laser treatment."
